Changing the Look of a SharePoint Site

In SharePoint, you can easily customize the look for each of your sites. You will be taken through a simple wizard that allows you to setup and preview a look before you change anything.

First go to you’re the site you wish to change. Click the Setting button in the top right corner and click Change the look. If the option is not present, then that particular page cannot be altered.

Select a general template to use. You will customize it on the next page.
In the sidebar, you can customize the color, site layout, and font. When ready, click **Try it out**.

If you are satisfied with the layout, click **Yes, keep it**. To make changes, click **No, not quite there**.
