

Skype for Business Interface Update

When your organization has requested an update from the Lync client interface to Skype for Business, you will be prompted with this message.

To change your interface to the Skype for Business client, click **Restart now**.

Restart later will keep your client's Lync interface. Every time you log in to Lync, you will be prompted.

If **Restart now** is selected, your client will restart and appear as the Skype for Business interface.
