

Knights Email – Android Devices

Knights Email can be configured to run on your Google Android devices. You can either use Exchange/Active Sync and have access to your email, calendar, and contacts, or use POP or IMAP and have access to only email.

Configuration on Android

You can configure your email to work within Google Android a few different ways. Configuration of Active Sync / Exchange may differ on your android device. This configuration was done on a Motorola Droid 2 Global running Android 2.2.

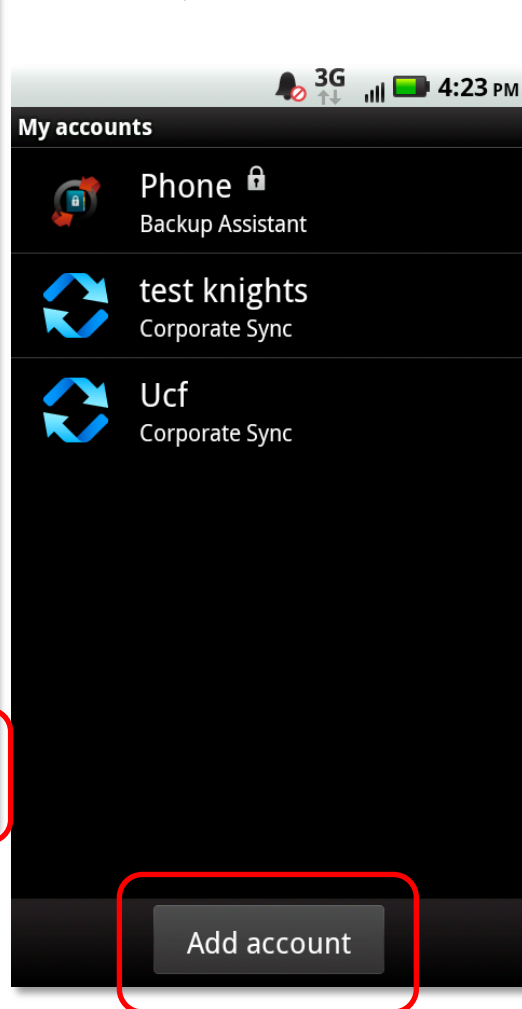

Go to **Menu** → **Settings**

Go to → **Accounts**

Go to → **Add Account**

Microsoft Exchange (Active Sync) Configuration

Active Sync, or Exchange Account, will allow you sync your Email, Calendar, & Contacts across multiple computers and devices

1. Go to → **Corporate Sync** or Exchange

Enter your existing Corporate Sync account:

Email address:
jontest@knights.ucf.edu

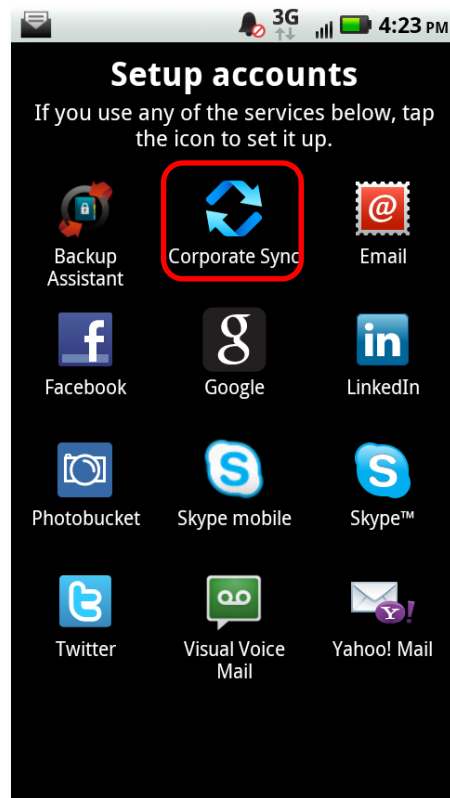

Password:
.....

Domain:
knights.ucf.edu

Username:
jontest@knights.ucf.edu

Server:
outlook.office365.com

Use secure connection

2. Enter in the following Information

Email address: **username@knights.ucf.edu**

Password: **YoUrPaSsWoRd** (Case Sensitive)

Domain: **knights.ucf.edu**

Username: **username@knights.ucf.edu**

Server: **outlook.office365.com**

Secure: **Yes**

IMAP and POP Configuration

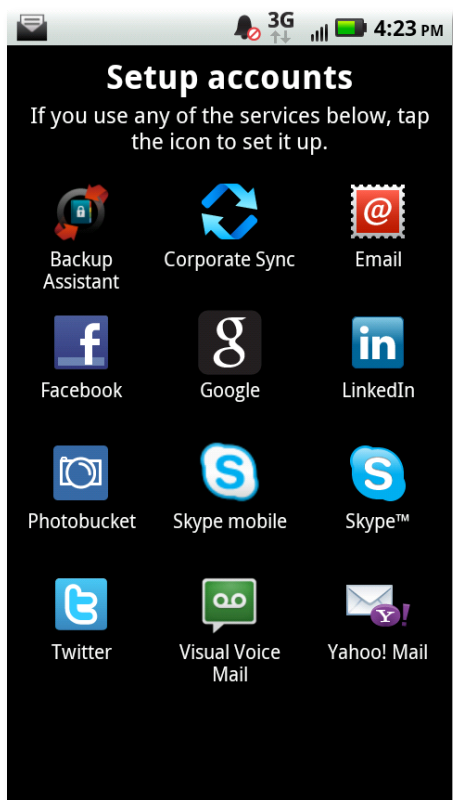

IMAP allows you to have just your email synced between devices. POP allows you to send and receive mail, but it is not synced with any other devices.

	SERVER NAME	PORT	ENCRYPTION METHOD
POP3	outlook.office365.com	995	SSL
IMAP4	outlook.office365.com	993	SSL
SMTP	smtp.office365.com	587	TLS

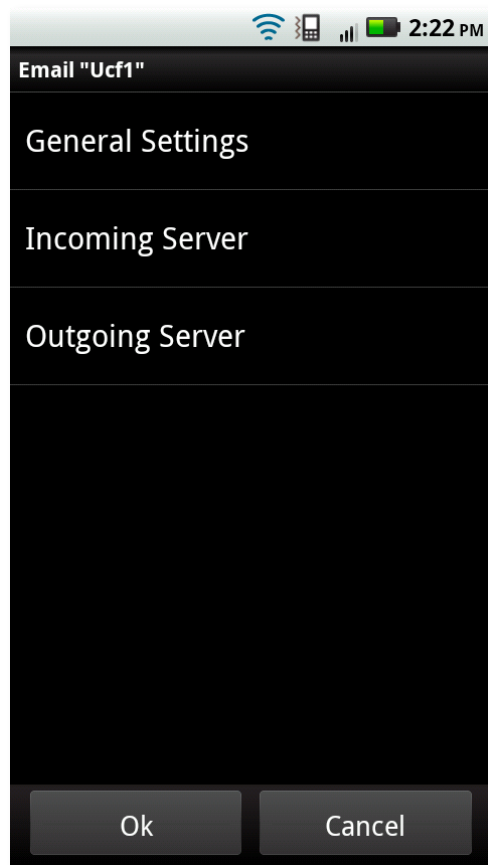

IMAP Configuration

IMAP will only sync your phone with your Email

Go to → **Email**

You will need to configure **General Settings**, **Incoming Server**, and **Outgoing Server**

General Settings

Enter in the nickname for this account under **Account Name.**

Enter in your **Real Name**

Enter in the full **Email Address**
username@knights.ucf.edu

Configure Incoming Server

Incoming Server

IMAP Server: **outlook.office365.com**

Username: **username@knights.ucf.edu**

Password: **YoUrPaSsWoRd**

Advanced Settings

Port: **993** (995 for POP)

Secure: **Checked**

Encryption: **Auto**

Configure Outgoing server

Email "imap knights mail": Outgoing server

SMTP server
smtp.office365.com

Username:
jontest@knights.ucf.edu

Password:
.....

Advanced settings

Ok Cancel

Outgoing Server

SMTP Server: **smtp.office365.com**

Username: **username@knights.ucf.edu**

Password: **YoUrPaSsWoRd**

Advanced Settings

Port: **587**

Encryption: **Auto**

Authentication: **Auto**

Outgoing server: Advanced settings

Port:
587

Use secure connection

Use secure password (TLS):
Auto

Authentication:
Auto

Verify Certificate

Ok Cancel

POP Settings

POP will not sync, but it will just send and receive email from the server. It is almost the exact same as the IMAP setup except the **Incoming Port** is **995** and you select **POP** instead of IMAP on the incoming server settings.

Email address: **username@knights.ucf.edu**

Password: **YoUrPaSsWoRd**

Username: **username@knights.ucf.edu**

Incoming IMAP Server: **outlook.office365.com**

Port: **995**

Encryption: **SSL**

Outgoing SMTP Server: **smtp.office365.com**

Port: **587**

Encryption: **TLS**
